

Turn articles into carousels automatically.

Carousels drive engagement but are tedious to create. Posta removes the friction by rendering slide text over backgrounds and stitching a ready-to-post PDF in one API call.

AI writes slides, Posta builds PDF.

An LLM condenses your article into short, scannable slides. A fast image model generates brand-aligned abstract backgrounds. Posta composites them into a shareable carousel PDF.

Text stays readable on any background.

Posta renders text as an SVG layer with a white fill, dark outline, and gradient scrim. No headless browsers—just sharp, legible compositing that works over any background color.

One API call, no design tools.

Upload your backgrounds and slide copy, and Posta returns a LinkedIn-ready PDF. Works via REST API, Claude Code skill, or n8n node for zero-code automation.
